

Sophos Mobile

Mobile Productivity with Sophos Security

Sophos Mobile is the Enterprise Mobility Management (EMM) solution for businesses that want to spend less time and effort managing and securing mobile devices. With its best-in-class data protection, comprehensive security, and flexible management options, Sophos Mobile is the best way to allow the use of mobile devices for work.

Highlights

- ▶ Complete EMM solution
- ▶ Manage iOS, Android, and Windows Mobile devices
- ▶ Manage Windows 10 laptops, desktops, and tablets
- ▶ Deploy hosted with Sophos Central or install on-premise
- ▶ Sophos Container for email, documents, and web content
- ▶ Manage Android enterprise (Android for Work)
- ▶ Flexible self-service portal
- ▶ Award-winning Mobile Security for Android

Secure Enterprise Mobility Management

Sophos Mobile is a comprehensive EMM solution with extensive features for Mobile Device Management (MDM), Mobile Application Management (MAM), and Mobile Content Management (MCM). Manage iOS, Android, and Windows 10 Mobile devices side-by-side with Windows 10 computers to ensure a uniform company security and compliance policy. And, because everything we do at Sophos is about security, Sophos Mobile will keep business data, users, and devices protected and secure.

Flexible deployment options

Save IT resources and get going quickly by deploying Sophos Mobile with the hosted and web-based Sophos Central, where you can manage all Sophos products in one unified admin interface. Add further layers of endpoint, network, and server security quickly and easily. Whether you choose to deploy Sophos Mobile hosted in Sophos Central or installed on-premise, features and functionality stay the same.

Remote configuration and setup

Spend less time enabling the use of mobile devices in the company for increased productivity, and rest easier knowing that the associated risks are reduced. Configure BYOD or corporate-owned devices remotely with a powerful selection of policies, profiles, and configuration options, and install, remove, and manage apps on those devices. Reduce your help desk calls by helping your users to help themselves with the flexible self-service portal, entirely without IT involvement.

Keep business data protected and personal data private

Keeping business data protected and secure on personal or company-owned devices is critical. To make sure that business data is safe and personal information is kept private, Sophos Mobile comes with powerful container capabilities. You can also take advantage of native OS containerization features delivered by Android enterprise (formerly Android for Work), iOS, or Samsung Knox.

Productivity - Let your users work on any device they want

Sophos Mobile enables companies to improve productivity by letting employees securely use personal or business-owned mobile devices for work. A wide range of mobile device management and mobile content management capabilities ensures the company data and devices are secure [e.g., configuring devices, enabling email, and providing access to sensitive corporate documents].

Security – For data, users, and devices

Sophos Mobile keeps important company data and devices protected and secure. Sensitive business information is protected with encrypted containers, users are protected from malicious web links with anti-phishing technology, and devices are secured from threats and malware with the Mobile Security app. Easily restrict access to business resources or initiate remediating actions in case of compliance violations.

Simplicity – Easy to configure, manage, and maintain

Sophos Mobile lets you get started in minutes as a hosted solution in Sophos Central, or you can choose to install on-premise. The intuitive admin workflow together with the flexible self-service portal means your admins will spend less time on the day-to-day tasks of securing and managing mobile devices, leading to a lower total cost of ownership.

Value – Secure your mobile devices affordably

Sophos Mobile is licensed based on number of users instead of number of mobile devices, which means that you don't have to worry about users that have more than one device. The affordable and flexible license pricing lets you manage and secure the devices of the whole organization without overspending on underutilized features.

Powerful Containers

Ensure sensitive company information stays safe and separated from personal data on the device with the secure and AES-256 encrypted Sophos Container. Easy-to-use apps for iOS and Android let users access containerized content:

Sophos Secure Email for email, contacts, and calendars, and **Sophos Secure Workspace** for documents and corporate web browsing. The Sophos Container saves you time with effortless email and data-access configuration, and it protects your users from malicious links in documents and content with anti-phishing technology. You can even restrict access to the container based on time, Wi-Fi, or geo-location.

Additionally, you can take advantage of native OS containerization features like Android enterprise (Android for Work), iOS, and Samsung Knox.

Sophos Secure Email

Sophos Secure Email is a fully-featured, secure, and containerized personal information management (PIM) app for

Android and iOS that lets you isolate business email, calendars, and contacts from private data on the mobile device. Easily revoke business access based on device compliance rules. Sophos Secure Email lets you provision business email quickly, securely, and consistently across different device models and OS variations.

Highlights:

- ▶ Native email experience with increased administrative control
- ▶ Containerized business email ideal for BYOD devices
- ▶ Easily and consistently configure secure email across different OS versions
- ▶ Anti-phishing technology protects users from malicious content links hiding in emails or content
- ▶ Email attachments open within the secure container remain encrypted
- ▶ Control data leaving the container (e.g., restrict copy and paste, open with, etc.)

Sophos Secure Workspace

Sophos Secure Workspace is a containerized mobile content management app for iOS and Android that provides a secure way to manage,

distribute, and edit business documents and view web content. Edit Office format documents without leaving the container environment to ensure encrypted content remains secure. When managed by Sophos Mobile, admins can easily restrict access to content based on device compliance rules. In combination with Sophos SafeGuard Encryption, Sophos Secure Workspace provides seamless exchange of encrypted files – stored locally or in the cloud – between iOS and Android, Windows, and macOS users.

Highlights:

- ▶ Documents are stored securely with AES-256 encryption
- ▶ Distribute files to devices from the central admin interface
- ▶ View and edit text, PDF, and Office format documents
- ▶ Corporate Browser for secure access to intranets or corporate websites
- ▶ Access files from all leading cloud storage providers, including any WebDAV service
- ▶ Retrieve encryption and recovery keys from a Sophos SafeGuard encryption server (requires Sophos SafeGuard 8)
- ▶ Collaborate with password protected HTML5 files
- ▶ Secure Photo takes and stores photos encrypted

Sophos Mobile Security

The Sophos Mobile Security app protects your Android devices without compromising performance or battery life. Powered by leading Sophos anti-malware technology, Sophos Mobile Security offers an award-winning level of anti-malware and antivirus protection together with potentially unwanted app detection, privacy advisor, web protection, web filtering for unwanted content, and much more. Sophos Mobile Security monitors device health continuously to ensure that you are notified if a device is compromised, and can take remediating action or automatically revoke access to corporate resources. Additionally, Sophos Mobile Security for Android includes a Secure QR Code Scanner and Authenticator for one-time passwords.

Award-winning Android Security

Sophos Mobile Security has achieved a long and unbroken streak of perfect 100% protection scores in AV-TEST's comprehensive test of Android security apps. It has been recognized with the **AV-TEST Best Android Security 2016** award, after receiving the **AV-TEST Best Protection** award in 2015.

Highlights:

- Protection from malicious apps and websites, spam, potentially unwanted apps (PUA), and low-reputation apps
- Privacy Advisor
- Application whitelisting
- Secure QR code scanner
- Authenticator for one-time passwords
